Architecture matchmaking

Place each scenario card in the column whose structure fits best. If a card fits two columns, put it on the line and say why.

GRID

CNN, U-Net, vision transformer

Bet: nearby pixels matter, and patterns repeat anywhere.

SEQUENCE

RNN, LSTM, temporal transformer

Bet: the recent past shapes the present.

GRAPH

Graph neural network

Bet: connected things influence each other.

POINTS AND LOCATION

MLP with a location encoder

Bet: where you are carries signal at many scales.

MANY MODALITIES

Foundation model

Bet: pretrain broadly once, adapt with few labels.

FOR EACH CARD, ONE SENTENCE:

"We chose a _____ because its bet, _____, matches how this data is structured."
