GeoAI design canvas

Pick one problem. Work left to right. 10 minutes to fill, 1 minute to pitch.

Group: _____

Problem: _____

1 Data

- What is observed?
- Where, when, and by whom?
- What is missing or biased?

2 Structure

- Grid, sequence, graph, points, text, or several?
- At what scale and resolution?

3 Model

- Which architecture?
- What is its bet (inductive bias)?
- Why does that bet fit your data?

4 Validation

- Random or spatial split?
- What counts as a "new place" here?
- Which metric, and why?

5 Risk

- Who could be harmed?
- Who could be missed?
- What would you monitor after deployment?

ONE-MINUTE PITCH

Our problem is _____. We treat the data as a _____, so we use a _____ because _____.

We will know it works in a new place when _____. The risk we would watch most closely is _____.
